## MS Access Repair & Compact: Release Notes

(v1.034, 20-Dec-2010, 01:32 AM)

*Disclaimer: The author of this product accepts no responsibility for damages resulting from the use of this product and makes no guarantees, warranty, or representation, either express or implied, including but not limited to, any implied warranty of merchantability or fitness for a particular purpose. This software is provided "AS IS", and you, its user, assumes all risks when using it.*

### Version 2.02.000

1. Now supports **Windows 7 (x64)**.

### Version 2.01.000

1. Added menu item **Help | Check for Access 2007**.
2. Updated **User Guide** to add additional info about file extensions and how MSARC handles them.

### Version 2.00.000

1. Upgraded to .NET v3.5.
2. Added support for Access 2007 (accdb) files using **Microsoft Office 12.0 Access Database Engine Object Library**.
3. Updated **User Guide** to add info about Access 2007, and a new error section for Errors 5 and 479.
4. Fixed a bug, where if the source DB was read-only, and a restore failed, it would still say RC was successful.

### Version 1.22.000

1. Fixed crash caused by **GetBytes** under **Windows Vista**.
2. Removed the version number from **MSAccessRepairCompact.exe**.

### Version 1.20.000

1. Updated screen shots and upped version as install was not updating.

### Version 1.19.000

1. Network drive letters are now converted to UNC filenames, so that when **MSAccessRepairCompactConsole.exe** runs as a Scheduled Task, it can find the source file and destination folder without having to be logged in.
2. Added more log file output for both applications. Also, they are now the same for a given INI file.
3. Added more console output to **MSAccessRepairCompactConsole.exe**, and a 10 second pause at the end, so a user can copy the screen, if needed.
4. Made **MSAccessRepairCompactConsole.exe** into a larger console for easier readability.
5. Changed extension of second backup file after RC to \*.sss, so files are named in a group; e.g., **MyFile\_2008091001.mdb**, **MyFile\_2008091001.sss** and **MyFile\_2008091001.zip**.

6. Now, it always looks for a file with a name that is higher than any of the three backup files found with extensions mdb/sss/zip. This keeps files in a matched group, even if one or more of the files are not present from a previous run. Newer files are not given lower numbers.

## Version 1.18.000

1. Added **Create ZIP after RC** option.
2. Added menus.
3. Added creation of Desktop shortcuts.
4. Added copying of console command line to clipboard for Task Scheduler.

## Version 1.17.000

1. Added ability to load/save INI settings.

## Version 1.16.000

1. Added **MsAccessRepairCompact\_ReleaseNotes.pdf** to installation.
2. Changed the reference to the application to MSARC in shortcuts and documentation.
3. Added support for multiple INI files to RC different DBs in the same installation.
4. Added **Create backup after RC** option.
5. Usernames and passwords are now encrypted.

## Version 1.15.000

1. Initial release of MSARC to public domain.

## Technical Support

The best way to get technical support for **MSARC** is to contact **Sunny Jamshedji** at **Sunny Solutions**:
